

Dear reader,

In today's world, we face a range of prevalent socioeconomic issues such as social and economic effects caused by the global pandemic to deep-rooted socioeconomic issues in education and healthcare. Unlike medical matters, socioeconomic issues are greatly overlooked, and are arguably the underlying causes of issues in other fields as well.

Journals, publications, or media will often discount socioeconomic issues, claiming they are "too broad" when in fact they have significant impact on all surrounding fields such as law, medicine, and philosophy. Despite socioeconomic being the core field to almost all other major issues, its matters remain neglected and unresolved. Due to the lack of research, the effects of these deep rooted socioeconomic issues continue to worsen matters in fields stemming from economics and social science. Beyond any current research published, most is not accessible to the public and almost all of the studies are not being utilized for legislative change. This results in wasted studies that cannot be read by a mass population that is affected by the issues being studied.

How is the International Socioeconomics Laboratory different?

Our Journal at the Laboratory, 'Across the Spectrum of Socioeconomics', provides extensive empirical studies regarding these prevalent socioeconomic issues. All of the research is individually published as open-access research with an individual DOI. The Journal showcases a range of the most urgent and comprehensive studies regarding their topic. In order to avoid unused research, the Laboratory works directly with various politicians and institutes to create sustainable solutions that utilize researchers' findings.

The Laboratory uses its original findings and thorough data analysis to draw concrete conclusions and create actions that address these prevalent issues. The publications are sorted by core topics which include, health, education, equality, and community. Each category connects critical socioeconomic issues together, allowing for a deeper understanding of how broad the field of socioeconomic truly is.

As the Laboratory continues to expand, the goal remains to create comprehensive, empirical studies that go to informing the public of the urgency of these socioeconomic issues and to build sustainable change based on factual data and analysis. Researcher fellows go beyond passive activism and create equitable and efficacious change to ensure a sustainable future for the world.

The International Socioeconomics Laboratory will continue to provide you with extensive, non-partisan research that informs you of current socioeconomic issues and their immediate and long term effects, with the hope of building a more aware and informed community.

Sincerely,

A handwritten signature in black ink, appearing to read "Sarah", with a stylized flourish at the end.

Sarah Derkach
President of the Laboratory
